- Claims 1 through 7
- Cited Literature 1, 2
- Remarks

Described in Cited Literature 1 is a hospital scheduling system in which it is possible to make a connection between a household terminal and the hospital system through a communications circuit, display the scheduled receiving and waiting times of the hospital, and cancel an appointment, etc. from the home. There is no particular technical difficulty in adopting the well-known Internet as the communications circuit (if necessary, refer to Cited Literature 2), and when doing so, a person skilled in the art could easily conceive of displaying the scheduled receiving and waiting times of the hospital, and of conducting processing such as canceling appointments through a web page.
